## List of Faculty/Experts

### *Geotechnical*

*Dr. J.N.Jha, Ph.D*  
*Prof. Kulbir Singh Gill, M.E*  
*Dr. B.S.Walia, Ph.D.*  
*Prof. Harjinder Singh, M.E*  
*Prof. Gurdeepak Singh, M.Tech.*

### *Structure*

*Dr. Harpal Singh, Ph.D*  
*Dr. Hardeep Singh Rai, Ph.D*  
*Prof. Harvinder Singh, M.Tech*  
*Dr. Jagbir Singh, Ph.D.*  
*Prof. Kanwarjit Singh Bedi, M.Tech.*  
*Prof. Parshant Garg, M.Tech*  
*Prof. Harpreet Kaur, M.Tech.*  
*Prof. Inderpreet Kaur, M.Tech.*

### *Highway*

*Prof. Kulbir Singh Gill, M.E*

### *Material Testing*

*Dr. Jagbir Singh, Ph.D.*  
*Prof. Kanwarjit Singh Bedi, M.Tech.*

### *Material Testing*

*Dr. Jagbir Singh, Ph.D.*  
*Prof. Kanwarjit Singh Bedi, M.Tech.*

### *Survey*

*Dr. B.S.Walia, Ph.D.*

### *Chemical Testing*

*Dr. R.P.Singh, Ph.D.*

### *Environmental Engg*

*Prof. Puneet Pal Singh, M.E*

# SOIL INVESTIGATION REPORT

1. **Date of Testing** : 2015-02-24
2. **Type of Structure** : Building
3. **Site location** : Latitude : 30.89107 Longitude : 075.90720
4. **Tested in Presence of** : Daljit singh, Daljit singh
5. **Report Submitted to** : Daljit singh, Daljit singh
6. **Report Prepared by** : Dr. J. N. Jha  
Prof. Kulbir Singh Gill  
Dr. B. S. Walia

# 1 Introduction

The soil investigation for the proposed Construction of Gaurd Room (Ludhiana Steel Ltd) had been taken up on request of Daljit singh, Daljit singh. The field soil investigation as per requirements was carried out on 2015-02-24 by testing team of this institution in the presence of Daljit singh & Daljit singh, Superwiser of the concerned department.

The purpose of this soil investigation was to determine the nature of the subsoil stratum and the safe net allowable bearing capacity of the soil.

# 2 Field Soil Investigation

1 bore holes were tested in the field Standard Penetration Test (S.P.T) was carried out at the proposed site as per I.S.Code 2131-1981 in the soil deposits at the foundation level and at an interval of 1.5 m or at the location where change of soil strata takes place during field testing. The samples of the soil both disturbed and tube samples were collected at different depths and were properly sealed in air-tight plastic bags after labelling them carefully to maintain the natural moisture content.

# 3 Laboratory Testing

As per I.S. Code 6403-1981, the least of the following shall be taken as safe net allowable bearing capacity of the soil.

1. The safe net allowable bearing capacity from shear considerations is obtained by dividing net ultimate bearing capacity by a suitable factor of safety.
2. The safe net allowable bearing pressure that can be imposed on the base of the foundation without the settlement exceeding a permissible value is calculated either from settlement analysis or from the Standard Penetration Test Values(N) whichever is applicable depending upon the nature of sub soil strata.

# 4 Water Table

The underground (i.e. sub-soil) water was 3 at the time of field soil investigation.

# 5 Proposed Substructure

The substructures i.e. foundations of the proposed Building may be taken as wall footing and isolated column foundation. The least soil properties have been taken for calculating the bearing capacity of soil for the following types of foundations.

## 1. Wall Foundation

$$\begin{array}{lll} \text{Depth of wall foundation, } D_f & = & 3 \text{ m} \\ \text{Width of wall foundation, } B & = & 4 \text{ m} \end{array}$$

## 2. Column Foundation

$$\begin{array}{lll} \text{Depth of column foundation, } D_f & = & 4 \text{ m} \\ \text{Size of column foundation} & = & 4 \text{ m x 4 m} \\ \text{Length of column foundation , } L & = & 4 \text{ m} \\ \text{Width of column foundation, } B & = & 4 \text{ m} \end{array}$$

The data obtained from the field soil investigation and the laboratory tests have been used in the preparation of this report.

## 6 Bearing Capacity Calculations

### 6.1 Bearing Capacity Based on Shear Considerations

(As per I.S.Code - 6403:1981)

### 6.2 Wall Foundation

$$\begin{array}{ll} \text{Depth of wall foundation, } D_f & = 3 \text{ m} \\ \text{Width of wall foundation, } B & = 4 \text{ m} \end{array}$$

The least soil properties at the foundation level i.e. at 3 m depth are:

$$\begin{array}{ll} \gamma & = 4 \text{ kN/m}^3, \quad c = 4 \text{ kN/m}^2 \\ \phi & = 0^\circ, \quad \phi' = 0^\circ \end{array}$$

Bearing Capacity factors are:

$$N_c' = 4, N_q' = 4 \quad \text{and} \quad N_{\gamma}' = 4$$

Shape factors are:

$$S_c = 4 \quad S_q = 4 \quad S_{\gamma} = 4$$

Depth factors are:

$$d_c = 4, d_q = d_{\gamma} = 4$$

Water table correction factor,  $w' = 4$

$$\begin{aligned} \text{Ultimate net bearing capacity, } q_u' &= 0.67 \times 4 \times 4 \times 4 \times 4 + 4 \times 3 \times (1 - 4) \times 4 \times 4 + 0.5 \times 4 \times 4 \\ &\times 4 \times 4 \times 4 \times 4 \\ &= 4 = 4 \text{ kN/m}^2 \end{aligned}$$

$$\text{Safe net allowable bearing capacity} = q_u'/2.5 = 4/2.5 = 4 \text{ kN/m}^2$$

### 6.3 Column Foundation

$$\begin{array}{ll} \text{Depth of column foundation, } D_f & = 4 \text{ m} \\ \text{Size of column foundation} & = 4 \text{ m} \times 4 \text{ m} \\ \text{Length of column foundation, } L & = 4 \text{ m} \\ \text{Width of column foundation, } B & = 4 \text{ m} \end{array}$$

The least soil properties at the foundation level i.e. at 4 m depth are:

$$\begin{array}{ll} \gamma & = 4 \text{ kN/m}^3, \quad c = 4 \text{ kN/m}^2 \\ \phi & = 0^\circ, \quad \phi' = 0^\circ \end{array}$$

Bearing Capacity factors are:

$$N_c' = 4, N_q' = 4 \quad \text{and} \quad N_{\gamma}' = 4$$

Shape factors are:

$$S_c = 4 \quad S_q = 4 \quad S_{\gamma} = 4$$

Depth factors are:

$$dc = 4, dq = d\gamma = 4$$

Water table correction factor,  $w' = 4$

Ultimate net bearing capacity,  $q'_u = 0.67 \times 4 \times 4 \times 4 \times 4 + 4 \times 4 \times (1 - 4) \times 4 \times 4 + 0.5 \times 4 \times 4 \times 4 \times 4 = 4 \text{ kN/m}^2$

Safe net allowable bearing capacity  $= q'_u / 2.5 = 4 \text{ kN/m}^2$

## 7 Bearing Capacity Based on Standard Penetration Test Value

The result of concrete cubes sent by you tested on 29.10.11 are as under:

Sr No.	Depth(m)	Overburden pressure (kN/m <sup>2</sup> )	Correction Factor	Observed Value of N	Corrected Value of N
1	4	4	4	4	4

1.

Depth of wall foundation,  $D_f = 3$

Width of wall foundation,  $B = 4$

Safe net allowable bearing pressure for

$B = 4, N = 4, S = 4 \text{ \& } w' = 4 ] = 4 \text{ kN/m}^2$

Taking least of A & B the safe net allowable bearing capacity  $= 4 \text{ kN/m}^2$

The safe gross allowable bearing capacity  $= 4 \text{ kN/m}^2$

2.

Depth of wall foundation,  $D_f = 4$

Width of wall foundation,  $B = 4$

Safe net allowable bearing pressure for

$B = 4, N = 4, S = 4 \text{ \& } w' = 4 ] = 4 \text{ kN/m}^2$

Taking least of A & B the safe net allowable bearing capacity  $= 4 \text{ kN/m}^2$

The safe gross allowable bearing capacity  $= 4 \text{ kN/m}^2$

## 8 Remarks:

1. The bore hole logs showing the nature of subsoil stratum alongwith standard penetration test values(N) at different depths and soil properties from laboratory test results are attached.
2. The safe **net** allowable bearing capacity for wall foundation 4 m wide at a depth of m from the existing surface is  $4 \text{ kN}/m^2$
3. The safe **gross** allowable bearing capacity for wall foundation 4 m wide at a depth of 3 m from the existing surface is  $4 \text{ kN}/m^2$
4. The safe net allowable bearing capacity for column foundation of size 4 m x4 m at a depth of 4 m from the existing surface is  $4 \text{ kN}/m^2$
5. The safe gross allowable bearing capacity for column foundation of size 4 m x4 m at a depth of 4 m from the existing surface is  $4 \text{ kN}/m^2$
6. The sub-soil water was encountered at a depth 3 m investigation. at the time of field soil
